

USF GuestID Request Process

Brief Description:

The USF Guest ID process allows individuals who are affiliated with USF but are not employees or students to request a U# and NetID. This process is primarily utilized by consultants, vendors, contractors, or guest presenters. This allows these individuals to login to our network, computers, and be granted building access.

This was previously two separate processes for USF Tampa and USF Health. USF Tampa had a manual VIP process that required sponsors to email the information of the Guest to the service desk. USF Health had an automated process that allowed the guests to request the account themselves. With the implementation of the MIM project, both process will be obsolete. The USF Guest ID process is a consolidation of these two processes and will replace them when MIM, the new identity system, goes live.
